E. A. DEANE, Treasurer.

Montague, Feb. 1st, 1882.

REPORT  
OF THE  
SCHOOL COMMITTEE OF MONTAGUE,  
FOR THE YEAR ENDING MARCH 1, 1882.

---

The continuance of the pleasant relations between all parties to the schools which seem to be more and more amicable as the prosperity and intelligence of the Town advance, makes it an agreeable duty to again render our annual report.

We can speak of the present in general commendation, and very hopefully and confidently of the future. We have not been pleased with everything, nor did we expect unqualified approval from every source, even with our best and most conscientious efforts. We feel very grateful for the apparently well established disposition of the community to recognize our good intentions, and to treat our mistakes charitably. A Committee with a commendable purpose to advance and improve the educational interests by new measures, is certain to encounter more or less friction. Every community has some individ-

uals who want things to remain just as they have always been, and look with positive distrust and disapproval upon any change. These individuals were the chief mourners when the district system was abolished, and still refuse to be comforted. To be a party to the petty feuds and factions that had grown up in almost every school district, was an inalienable right. A new teacher must go into the school every term, no matter how worthy the last one, nor what uncertainty and confusion the change involved, so each had his turn to hire. And even to this day, after more than a dozen years of the town system, they speak with peculiar affection and interest of "our school" and "our district" as though they were circumscribed by the old boundaries, and had a personal investment in the old school house, distinct from their interest in all the others.

They refuse to see that they own as much in one school building as another, and pay a common tax for the support of all, and have as much claim upon one as another, so that wherever the Committee is pleased to send their children they encroach upon nobody's rights and prerogatives, but are simply enjoying and availing themselves of their own. They cannot see why the number of schools should not remain the same, even when districts are nearly depopulated. They look upon the suspension of a school as an infringement upon their rights, though its numbers have been reduced from forty to five pupils. These charges happily apply to but a very few. Yet a few active, obstinate men may, at least, cause themselves some distress, and others some annoyance, if they do no greater mischief. Except the few alluded to, though some of the large majority who now sustain us looked at first with doubt upon some radical changes, there is a general verdict in favor of the wisdom of the measures adopted by the committee. They can see that it was not wise to maintain half a dozen schools where the same object could be attained better and more cheaply in one. They can see that an indispensable condition to success in a school is a good number of

pupils, say from twenty-five to forty. None of the suspended schools had nearly this number. Another obvious condition is an attractive, well-ventilated, well-warmed building. Only one of the former districts can claim any such a possession. And that the three or four hundred dollars saved can be applied to the one school with palpable effect, needs no demonstration. It is also admitted that the consolidation has been for the best interests of the school at the centre, of which the suspended schools now form a part. Without sufficient numbers a thoroughly graded school, consisting of a Primary, Grammar and High department, could not well be constituted, and without a reasonable number we should hardly be justified in incurring the expense of maintaining three schools at the centre. Re-open the old district schools and return the thirty or forty children to them, and it would be impossible to make them anything but mixed schools, while the one at the centre, of which we believe we have a right to be proud, must relapse into the same old-fashioned state. The consolidation will be of great utility in the future, as it has been in the past few years. To illustrate: at the City we had a large class that had outgrown the school, had advanced not only to the high school course but considerably into it. Justice could not be done them if they remained, without doing injustice to the rest of the school, which had the three prescribed grades besides. This class was sent, a part to the high school at the centre and a part to the highest grade at Turners Falls (the committee giving them the privilege of electing), where they were prepared to enter the classes of the respective schools with no interruption in their course. At Federal street, which we design to keep of the primary grade, a class of seven or eight had advanced to the second year of the grammar school course. This class was transferred to the center grammar, the pupils having pursued the same studies, and their advancement having been practically identical.

Should the population increase so as to over-crowd the cen-

the house, a school can readily be constituted of a grade common to one of the grades in the center, and kept in the west house, it being one of the best in town, without reference to whether the pupils happen to live within the limits of what was once the west district. A school thus formed can be maintained as a department of the centre, like Federal street and the other adjacent schools. We request the teachers in all these departments to confer together, with a view to keep them uniform in studies and advancement, and as well as may be in methods of instruction.

So much of our Report is more particularly applicable to the department of the centre.

## TURNERS FALLS.

The rapid increase and continual change in the population in this department make frequent changes in the regulations necessary. For this reason we have delayed making what we could call a permanent grade and course of study.

Within the past year however we have effected a reorganization and framed a course of studies which we think can be well adjusted to the schools. Each primary has been made of a single grade. In years past they have been of two and three grades, and promotions have been made by classes. Hereafter promotions are to be made by schools, the same schools to be advanced through all the primary and intermediate grades, giving grades without a division.

The overgrown primaries should have the very best facilities. In them but little study can be insisted upon or enforced. If of but one grade the duties and exercises will be common to all, and the teaching can be made what it should be, almost wholly oral. Oral teaching develops and makes a constant and

healthful demand upon the resources of the teacher and invites her to acquaint herself with all the improved methods that are being devised by public educators and published in public prints. It shows her the fallacy of "resting on her laurels," of even being content to know and apply the best tested and most approved methods of to-day, without a desire and purpose to read and extend her observation to the never-so-fast advancing discoveries in ways of instruction and discipline, and means of making the school-room pleasant and attractive and healthful to children.

The large primaries at Turners Falls need and deserve the best teachers and the best instruction. Here the application of the most modern facilities do not conflict with hereditary and over-sensitive prejudices as is often the case in rural districts. Here public opinion seems to evince a preference for them.

The course for the 8th grade has been made of the high school order, though as yet there seems to be no imperative demand for a liberal high school course, embracing all the classical and English studies usually adopted.

The alacrity of the responses to the demand for a new school house almost every year is a good indication that the community has an adequate sense of the importance of making the best provisions for the education of the children of all classes and conditions. The tolerant, harmonious public sentiment, an indispensable factor, is a source of great gratification to the committee.

### ATTENDANCE.

The attendance of the spring and fall terms was the best for a good many years. The winter term has been seriously interrupted by epidemic diseases, mumps, measles and small-pox; so that the record for the year will not be all we could wish. It may seem like commonplace moralizing to attempt to add any-

thing to what has been urged in years past on this word-worn subject. Parents are not all aware of the injury done the child by keeping him out for a day or two at a time to work, to visit or for any cause not absolutely necessary. Under the improved systems the child and the school suffer much more from absence than formerly. Our established system of marking and reporting each child, keeps the pupil and the parents informed of his rank in his class. The boy or girl who is kept out for a day or two now and then, loses lessons in important work, which his class learns and understands ; hence he works at a disadvantage for a whole term or more. Besides his mind has been diverted from the school and his interest consequently interrupted. Some parents take them out for a whole term and when they return sometimes complain because they are not assigned to their former class—a class a whole term in advance of them. The system of marking is based upon their daily record and written examinations. Absences place them low in the daily record, and the written examinations embrace all the work the class has been over, more or less, of which in proportion to the time the pupil has been absent is not understood by him. Parents with the best interests of their children and the schools at heart, will keep them out only under the most pressing necessities.

### APPROPRIATIONS.

In our last year's report we asked for an appropriation sufficient to carry all our schools through thirty-six weeks. Last year, we unexpectedly and unintentionally exceeded our appropriations. Demands presented themselves which we could not anticipate. We heard no censure for so doing. The desire seems general for three terms of twelve weeks each. At the last annual town meeting a sum was appropriated deemed sufficient for that end without a dissenting voice. At least two

new schools will have to be formed the ensuing year. Hence the appropriations should be not less than five hundred dollars more than for the past year.

In conclusion, we would say that it has been the leading ambition of the Committee to be able to say that the schools of Montague are graded Schools. The only means of effecting this in the old part of the town was, as we have tried to show, by uniting a number of them in one. And the better to facilitate this we have hired many teachers especially trained, and retained many through successive terms, and even years, that they might become familiar with their respective departments and be stimulated to devise and acquire the very best ways of teaching. It is with great satisfaction that we see the growing ambition of the pupils to keep up with their classes, and to go through the course in all the grades, and that parents share with them and encourage this aspiration. With our improved facilities for keeping parents informed of the progress, rank and deportment of their children, there is a greater familiarity with the state of the schools, and a corresponding greater disposition to promote their welfare.

SEYMOUR ROCKWELL,	}	SCHOOL COMMITTEE.
